

Information Technology

Abbotsford Traditional
Middle School

The aim of the Information Technology (I.T.) exploratory course is to help students develop lifelong learning patterns they need to live and work effectively in an information rich technological society.

Learning outcomes for I.T. are grouped into three categories:

Foundations - provide students with the fundamental knowledge, skills and attitudes to use technology tools in all areas of learning.

Process - encourages students to select, organize and modify information to solve problems. Through a variety of projects students develop an understanding of time, resource and project management.

Presentation - allows students to develop an understanding of how to effectively use technology tools to communicate ideas and information using a variety of media.

The focus of this course is not just on the programs or on the technology itself, but also on the appropriate use of the technology. Information Technology education promotes digital literacy and citizenship.
